## PHY 166 Recitation 2

## Chapters 4 and 5.

March 17, 2019

Figure 1: Figure for Problem 1.
1.) Two people want to pull a 1000 kg boat along a canal. Person 'A' pulls the boat with a force of $F_{\mathrm{A}}=800 \mathrm{~N}$ at an angle $49^{\circ}$. What must the magnitude of the force $F_{\mathrm{B}}$ exerted by person 'B' be, and at what angle $\phi$ with respect to the $+x$-axis should they pull the boat, in order to accelerate the boat with acceleration $a=1.28 \mathrm{~m} / \mathrm{s}^{2}$ ?

| System | Static friction $\boldsymbol{\mu}_{\mathbf{s}}$ | Kinetic friction $\boldsymbol{\mu}_{\mathbf{k}}$ |
| :--- | :---: | :---: |
| Rubber on dry concrete | 1.0 | 0.7 |
| Rubber on wet concrete | 0.7 | 0.5 |
| Wood on wood | 0.5 | 0.3 |
| Waxed wood on wet snow | 0.14 | 0.1 |
| Metal on wood | 0.5 | 0.3 |
| Steel on steel (dry) | 0.6 | 0.3 |
| Steel on steel (oiled) | 0.05 | 0.03 |
| Teflon on steel | 0.04 | 0.04 |
| Bone lubricated by synovial fluid | 0.016 | 0.015 |
| Shoes on wood | 0.9 | 0.7 |
| Shoes on ice | 0.1 | 0.05 |
| Ice on ice | 0.1 | 0.03 |
| Steel on ice | 0.4 | 0.02 |

Figure 2: Figure for Problem 2.
2.) A person is holding a 70 kg box stationary against a wall by applying a force $F_{\text {push }}=562 \mathrm{~N}$ at an angle $\theta=35^{\circ}$. (a.) Looking at the chart provided in Figure 2, determine what material interaction this corresponds to. What must the magnitude of $F_{\text {push }}$ be in order to push the box (b.) up the wall at constant velocity, and (c.) down the wall at constant velocity.
3.) A crate lies on an inclined plane tilted at an angle $\theta=25^{\circ}$ to the horizontal, with $\mu_{\mathrm{k}}=0.2$. (a.) Determine the acceleration of the crate as it slides down the plane. (b.) If the crate starts with an initial speed of $2 \mathrm{~m} / \mathrm{s}, 8.2$ meters up along the plane from it's base, what will be the crate's speed when it reaches the bottom of the incline?
4.) A device for training astronauts and jet fighter pilots is designed to move the trainee in a horizontal circle of radius 1.1 m . If the force felt by the trainee is 7.45 times her own weight, how fast is she revolving? Express your answer in both $\mathrm{m} / \mathrm{s}$ and rev/sec.
